	urgent	Not urgent
Important	• Needs to run everyday • Needs to remind me what to do • Needs to track my activity	• A visual way to handle the data • Compare the data over time • Able to push notifications onto phone
Not important	• Needs to output everything into a stored file • Needs to have a way to access the file • Has to keep track of the proper date/excuses	• Data deletion or long term storage off computer • Calorie tracker • Uploading to any digital storefront/working on mobile

A cron job runs everyday at 10pm asking:
Did you work out today?
no
yes
Why not?
What type of workout was it?
A new excuse entry is instantiated containing reason about why no workout (rest days counted here)
A workout entry is then instantiated containing data about what area was targeted + what the workout pertained
The entry is then written to a csv file which will also hold the date of the whole process occuring
